OBJECTIVE

Aspiring Chemical Engineer with strong problem-solving skills, focused on optimizing manufacturing and engineering systems. Passionate about driving industrial impact globally through innovation, efficiency, and sustainability.

WORK EXPERIENCE

Line Manager/Engineer

Volta Aluminium Company Limited (VALCO)

(January 2023- August 2024)

- Executed and optimized production schedules across four shifts, achieving 98% adherence while maintaining high efficiency and minimal downtime.
- Ensured 100% compliance with aluminum quality standards while managing a \$2M production and safety budget, reducing costs by 12%.
- Trained and evaluated 10 assistant managers, improving leadership effectiveness by 20%, and implemented proactive maintenance strategies to achieve 99.5% equipment uptime.
- Led teams to exceed key performance metrics, improving current efficiency (+5%), voltage stability (+3%), and metal purity (+2%) for sustained operational excellence.

Production Engineer /Shift Supervisor

Volta Aluminium Company Limited

(September, 2014-December 2022)

- Managed a 15-member crew per shift, ensuring production targets were met while maintaining a 98% compliance rate with safety and operational protocols.
- Optimized energy efficiency by fine-tuning individual cell voltages and coordinating with the rectifier station, contributing to a 5% reduction in power consumption.
- Led process improvements during the ISO certification, modifying SOPs in collaboration with pot operators, enhancing compliance and operational consistency.
- Coordinated molten metal and anode supply with the cast house and rodding plant, minimizing disruptions and ensuring a steady 12-hour production flow.
- Identified and resolved cell exceptions through proactive troubleshooting, reducing downtime by 15% and improving metal purity levels.
- Managed audits, staff training, and internal corrective actions, driving a 10% improvement in departmental KPIs and ensuring compliance with industry standards.

Intern

Tema Lube Oil Company Limited

(April 2014 – June, 2014)

- Inspected and tested raw materials, ensuring 100% compliance with quality standards for additives and base oils used in lubricant blending, reducing defects by 15%.
- Conducted comprehensive quality tests such as viscosity, total base number, density, demulsibility, metals and colour on finished products, achieving 99% specification compliance and enhancing overall product reliability.
- Maintained meticulous documentation and prepared weekly reports, leading to a 10% improvement in process optimization and data-driven decision-making.

Intern

Cocoa Processing Company

(April 2013 – June 2013)

- Verified packaging materials for accurate dimensions and optimal barrier properties, reducing material defects by 12% and ensuring product integrity.

- Conducted physical and chemical analysis of cocoa beans and chocolate, ensuring 98% compliance with quality standards for fat, moisture, ash, sugar, pH, free fatty acids, fineness, and shell content.
- Prepared testing solutions and performed microbiological analysis, detecting and preventing contamination with a 99% accuracy rate, improving food safety standards.

EDUCATION & CERTIFICATIONS

MEng Chemical & Petroleum Engineering (September 2024 – Present)
University of Calgary, Alberta, Canada

BSc. Chemical Engineering (Graduated in June 2014)
Kwame Nkrumah University of Science and Technology, Ghana

Diploma in Anode Production Process (April 2024)
R&D Carbon (Switzerland)

First Aid & CPR/AED Level C Training (Alberta, Canada)

COMMUNITY / VOLUNTEER ACTIVITIES (NON-PAID) /LEADERSHIP EXPERIENCE

- National Vice President of Fulani Youth Association of Ghana (FUYAG) (2020-2024)
- Yearly Forums and Programmes Held in Senior High Schools (2012 - 2015)

ACHIEVEMENTS

- Led a project to transform fume ore (waste) into aluminum, generating \$10,000 daily for Valco and improving sustainability. (*April 2023*)
- Implemented savers (spent anodes) to bake patched cells, saving \$18,000 per cell and enhancing operational efficiency. (*February 2023*)
- Improved metal purity from 60% to over 90% P1020 for nine consecutive months, increasing company revenue and product quality.
- Supervised a team to achieve 95.18% current efficiency on P69 cells for five months, exceeding the plant's KPI and optimizing raw material use. (*January–May 2023*)

PROFESSIONAL MEMBERSHIPS

- Ghana Institution of Engineers (GhIE)
- National Society for Black Engineers
